

MAINTAINING AND CLEANING YOUR PSP QUARTZ BENCHTOP

The maintenance and cleaning of your PSP Quartz Benchtop is easy to achieve by following these simple recommendations:

Daily Maintenance

Clean your top with a wet Microfiber cloth and clean water. Dry the surface with a tea towel, or soft cloth. Do not use products such as Janola, Jiff, Bleach or any other strong cleaning products. Always refer to the products instructions or ring PSP Stonecraft before use.

Difficult Stains or Marks

As with any stone surface, if acidic, coloured or oil based products are left on your benchtop for any period of time there is a chance of staining, discolouration or marking. If a spillage or mark of this type occurs then clean it up with water and if a stain or mark is left contact PSP Stonecraft for further maintenance options. A special cleaner and instructions are available for sale from PSP Stonecraft.

Long Term Care

Whilst being of the most enduring surfaces, remember Granite, Quartz and Marble are not indestructible. *Avoid standing or putting excess weight on any unsupported areas, particularly sink and hob areas or over a cavity that may house your dishwasher.* Always avoid rapid and extreme temperature changes on your surface. It is advisable to always use a Trivet or protecting board when placing any hot items on your Benchtop. Avoid leaving or covering your bench top with any cooking oils and fats as this may discolour or mark your stone over time. For any further advice or explanation of the above please contact a PSP Stonecraft Representative.

Please refer to our Website for further instructions on how to care for any Quartz benchtop.

*These simple hints will ensure your investment retains its quality and appeal for many years to come.
We are confident you will enjoy your investment, and thank you for choosing PSP Stonecraft.*
